Future Proof Your Memories with 4K

4K

Shoot 4K footage that contains about four times more detail than Full HD (3840 x 2160 pixels vs. 1920 x 1080) footage, and capture more of the incredible qualities that bring images to vibrant life.

Balanced Optical Steady Shot

Our advanced image stabilisation suppresses camera shake to stabilise movie shooting throughout the entire wide-angle-to-telephoto zoom range. For extreme shake, 5-axis Intelligent Active mode compensates for vibration in five different directions, so you can shoot stable high-quality movies even while running.

Fast Intelligent Auto Focus

Pioneered in the ground-breaking Alpha A7 range of cameras, Fast Intelligent AF uses an improved system that minimises lens motion, intelligently predicts the suitable AF range, and accelerates lens drive with a powerful new motor, resulting in ultra-fast focus response that lets you capture more fleeting moments with confidence.

New Exmor R Video-Specialised Sensor

Current 1/2.3" Sensor

New 1/2.5" Sensor

A newly developed image sensor, with pixels approximately 1.6 times larger, offers superior sensitivity for capturing beautiful high-quality images throughout the full range of shooting conditions, from dark night shots to full daylight.
