### HD Balanced Optical Steady Shot – Intelligent Active Mode

Our advanced image stabilisation suppresses camera shake to stabilise movie shooting throughout the entire wide-angle-to-telephoto zoom range. For extreme shake, 5-axis Intelligent Active mode compensates for vibration in five different directions, so you can shoot stable high-quality movies even while running.

### Class-Leading Wide-Angle Lens

Whether you're shooting movies or still images, the class-leading Zeiss Vario-Sonnar wide-angle lens can help you capture more of landscapes and indoor scenes, when you don't have enough room to step back. Even without a wide conversion lens, the camcorder shoots as wide as 26.8mm (16:9 aspect ratio) in movie mode.

### Fast Intelligent AF

Pioneered in the ground-breaking Alpha A7 range of cameras, Fast Intelligent AF uses an improved system that minimises lens motion, intelligently predicts the suitable AF range, and accelerates lens drive with a powerful new motor, resulting in ultra-fast focus response that lets you capture more fleeting moments with confidence.

### Time Lapse Capture

Capture breathtaking sky-scapes or intricate city scenes with the built-in time-lapse feature. Capturing still images continuously over an extended period of time, the CX625 can edit the entire sequence of still images into a seamless video, ready for playback as a time-lapse movie.
